Claims 1-19 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest an elevator system comprising a termination device associated with at least one end of the loading bearing member, at least a portion of the termination moving against a first bias responsive to a tension on the load bearing member that is below a selected threshold and moving against a second passive bias responsive to a tension that exceeds the threshold in combination with other limitations as recited in independent claim.

Claims 1-19 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.
